PROFILE

I grow products that have to be trusted before they can be bought — and that is the whole job in tokenized real-world assets. More than **ten years** of building and shipping digital products, the last two of them inside RWA: taking a tokenized product from an empty pipeline to live demand, and staying responsible for whether it actually grows afterwards. I have worked both ends of this market — retail launches and influencer networks on one side, issuer structuring and investor limits on the other — which is why I know where post-launch products quietly die: liquidity, secondary market and distribution, rarely the technology. I build on Solana, I write my own analysis in English and Russian, and I am still learning in public every single week.

WHAT I BRING

Growth and go-to-market. I take products to market with real money on the line: funnels, audience segmentation, channel pricing, partnerships and retention. One launch went from a \$2M to a **\$25M+ valuation in a week on a \$700 campaign budget**, because I picked the right channels instead of the loudest ones. I have also run an affiliate and trading-partner network for a tier-1 exchange, moving around **\$30M of monthly turnover**, and coordinated a pool of **200+ influencers** on a single project.

Tokenization and the institutional side. I qualify issuers, build the structure around a real asset and take it to an operator on the national registry — from the first call with a business owner to a signed issuance and reporting to holders. I have assembled a pipeline of **dozens of business owners** with live revenue, and I know the mechanics that decide who may hold a tokenized asset at all: allowlists, transfer restrictions, qualified and non-qualified investor limits, KYC and AML.

Market education and distribution. I turn trust into pipeline. A 13-chapter book on tokenization, a glossary of 76 terms, a six-module course and a steady stream of analysis in English and Russian — written for people who are about to make a decision with their own money, and used by owners who are deciding whether tokenization is right for them.

Ownership. I build the first version of a product myself, verify numbers before they leave the building, and run distributed teams across content, community and development. I use AI to move faster on preparation, but I keep negotiations, partnerships and relationships personal.

EXPERIENCE

ChainZap

Jul 2026 — present

Head of Growth — remote

Own growth for a Web3 product end to end — acquisition channels, partner network, conversion and retention — with direct responsibility for user and volume targets rather than for activity.

Work sits on the edge of product, compliance and market: keeping the growth engine honest in a regulated industry, where a good funnel that fails KYC brings nothing.

CityCode (with City AI)

May 2026 — present

Founder — closed city infrastructure on Web3 rails, CIS, hybrid

Built a three-layer city economy from zero: a free city guide, a paid closed membership circle with the local businesses, and a tokenization layer that turns the city's live revenue into a regulated instrument. Each layer pays for the next, so community and revenue exist before any token does — the reverse of how most RWA projects are built.

Ran the demand side myself: dozens of business owners in the city, venues, routes and events, with resident-contributed content and a partner circle that now generates recurring revenue.

Web3Yurich Agency

Aug 2024 — present

Founder & CEO — RWA and local tokenization advisory

Advise real-economy businesses and founders on tokenization: whether it makes sense at all compared with an ordinary loan, what the instrument should be, who the issuer is, how payouts are scheduled and which limits apply to ordinary investors.

Took projects from first call to structure: diagnostics, financial review, the issuance paperwork and placement support. Part of the work with international RWA companies sits under NDA and can be discussed in detail in conversation.

BYDFi (tier-1 exchange)

Oct 2025 – Jan 2026

Business Development, affiliate and trading partners — CIS, remote

Grew the exchange's affiliate side: recruited and managed partners and traffic buyers who bring trading volume, negotiated terms and kept the funnel moving. The network I worked with carried from **\$10M weekly to roughly \$30M monthly turnover**.

Web3YuRich

May 2022 – May 2026

Independent trading and market research — remote

Four years of trading my own capital across exchanges and on-chain venues. It is where I learned market structure from the inside — liquidity, price discovery, spreads and the behaviour of real holders under stress — and where I became certain that adoption is won on distribution, not on technology.

SELECTED TRACK RECORD

Token launches. SNG lead for the token launch of music producer Yuriy Bardash, the producer behind the band Griby — fan base to crypto audience on TON, peak valuation **\$1.5M+**. Team lead on the TRON project \$CIS — influencer and moderator coordination, valuation **\$5M+**. Invited as SNG marketer into a foreign team for \$ChillHouse: a \$700 channel budget and a hand-picked warm network took the project from a **\$2M to a \$25M+ valuation in a week**.

Trading infrastructure and exchange growth. Advised GmGn — the Solana trading terminal — on its entry into the SNG market, where marketing-attributed traffic carried **\$100M+ of monthly turnover**. Partner for the Bloom trading terminal, responsible for SNG traffic and promotion, and part of the launch phase for the Xbot and Raptor trading bots.

The numbers above describe each project's own outcome rather than an isolated personal figure — attribution in this sector was rarely recorded systematically. In every case named here my role was direct and deciding, not advisory, and I am glad to walk through any of them in detail.

HOW I WORK

Warm audiences before cold ones — I do not burn a channel's reputation for fast early numbers. I will not scale traffic to a product I have not personally used end to end, and I would rather fix what I find there than explain it later.

I separate market hype from what is actually true: every figure I publish or report is checked before it goes anywhere, which matters more in RWA than in any other part of this industry.

I know exactly what I am strong at and where I am still learning, and I say so out loud — that habit is the reason I have stayed useful across four very different market cycles.

LEARNING & DEVELOPMENT

Continuous, self-directed and published: tokenization mechanics across treasuries, private credit, funds, real estate and commodities; digital-asset regulation and the operating regimes of the CIS, including issuance through registry operators and investor limits; KYC, AML and banking regulation as the practical frame around every tokenized product; DeFi market structure — liquidity, oracles, liquidations and yield; and a working Solana track, from retail tools to token incentives.

LANGUAGES

Russian — native · **English** — C1, full professional proficiency

SELECTED PUBLICATIONS

Author of the book-course “**RWA. Мы объясняем**” (13 chapters), the **RWA glossary** (76 terms) and the “**YuRich RWA**” course (six modules) — no price calls, no signals. Weekly market analysis in English and Russian on X **@PavelYuRichRWA** and Telegram **t.me/YuRichRWA**, built in public.
